

AISHWARYA MURALI

Analytics Engineering · Business Intelligence · AI-Native Solutions

Bentonville, AR · m.aishwaryamurali@gmail.com · (682) 812-0700 · linkedin.com/in/maishwaryamurali · github.com/Aishwaryamurali-BI

SUMMARY

Analytics engineer and AI-native builder with 10+ years turning enterprise data into decision-ready products, and founder of Dantra — a production multi-tenant healthcare SaaS designed, built, and shipped solo using AI-agent development workflows (Claude Code). Previously architected the Power BI platform and Azure Synapse warehouse serving 300+ branches across four continents at Mainfreight. Expert in semantic modeling, DAX, advanced SQL, and dimensional design; hands-on with dbt, Snowflake, Microsoft Fabric, and Python. Daily practitioner of LLM-assisted analytics, automation, and code review — comfortable owning ambiguous problems from stakeholder discovery through architecture, delivery, and adoption.

CORE SKILLS

Analytics Engineering: Advanced SQL, dbt, Snowflake, star-schema dimensional modeling, semantic layer design, data quality testing, Git/GitHub, CI/CD

BI & Visualization: Power BI (DAX, Power Query/M, Service, deployment pipelines, RLS) — expert; Tableau; Apache Superset; Microsoft Fabric (Lakehouse, Dataflows Gen2, OneLake); KPI framework design

AI & Automation: Claude & Claude Code (multi-agent workflows, LLM-assisted development, automated code review), prompt engineering, Power BI Copilot, Kofax RPA

Data Platforms & Engineering: Azure Synapse, Azure Data Factory, SSIS, Python, PostgreSQL (row-level security, multi-tenant design), TypeScript/Next.js, Cloudflare Workers, REST APIs & webhooks, ETL/ELT

Stakeholder Partnership: Requirements discovery, executive storytelling, cross-functional collaboration, UAT, Agile/Scrum, mentoring

EXPERIENCE

Founder · Dantra (dantra.in) · Remote **2026 – Present**

White-label, multi-tenant dental practice-management SaaS for Indian clinics — patient records, FDI tooth charting, treatment planning, GST billing, scheduling, and WhatsApp-based patient communication.

- Designed, built, and shipped a production SaaS platform solo: TypeScript/Next.js on Cloudflare Workers, PostgreSQL with row-level-security tenant isolation, staging and production environments, and CI/CD gated by an automated cross-tenant isolation test matrix.
- Built a GST-compliant billing engine — sequential, gap-less, immutable per-branch invoice numbering, credit-note voids, and fully server-side money math — validated with concurrency stress tests against real Postgres.
- Engineered healthcare-grade data controls: append-only clinical records, field-level RBAC, per-mutation audit logging, and versioned consent designed for India's DPDP data-protection law; an adversarial AI red-team review returned zero critical findings.
- Operated the company AI-natively with Claude Code multi-agent workflows — automated code review, adversarial security and go-to-market review boards, and marketing production — delivering a multi-role team's output as a solo founder.
- Owned commercial strategy end-to-end: three-tier pricing and unit-cost model, WhatsApp Business Platform integration and message-economics design, investor deck, and a state startup-grant application.

Head of Business Intelligence & Customer Solutions · Mainfreight Inc. · Carson, CA **Mar 2021 – Dec 2023**

- Architected the enterprise Power BI platform and semantic layer serving 300+ branches across NZ, AU, EU, and Asia — governance, workspace structure, security, and deployment pipelines.
- Designed and deployed 15+ dashboards with drill-through from executive KPIs (spend, volumes, TEUs, lanes) to shipment-level detail across Airfreight, Seafreight, Warehouse, and Transport — cutting ad-hoc reporting requests 40%.
- Built performance-tuned star-schema models and reusable datasets with optimized DAX, applying testing, version control, and documentation standards.
- Built a centralized Azure Synapse warehouse fed by Azure Data Factory and Python pipelines with data-quality validation that reduced data errors 30%.
- Delivered an AR-aging dashboard that accelerated \$2M+ in client payments; wrote advanced SQL investigations informing executive decisions across Sales, Operations, Supply Chain, and Finance.
- Mentored a team of 4 analysts and BI developers, raising team productivity 25% through standardized practices and code review.

Business Intelligence Engineer · Modern Gourmet Foods · Irvine, CA **Apr 2019 – Mar 2021**

- Led BI platform restructuring, transitioning 85% of reporting from manual Excel pulls to automated Power BI / SQL-backed dashboards under enterprise data-governance standards.
- Engineered SSIS and Python ETL pipelines transforming raw ERP/PLM data into analytics-ready datasets powering 10+ KPI dashboards (inventory, sales velocity, margin).
- Implemented Kofax RPA for order entry and journal entries — 98% process-time reduction, 16% accuracy improvement, ~200 hours/month saved.

Business Intelligence Analyst · Tata Consultancy Services (Client: Citi) · Chennai, India **Nov 2012 – Dec 2016**

- Built dashboards used by 100+ global stakeholders across 5 regions to analyze payment trends, transaction volumes, and product performance.
- Designed SSIS ETL packages feeding the payments warehouse; connected reporting to SSAS OLAP cubes for cross-regional, multidimensional analysis.
- Authored BRDs, functional specs, and user stories; led Agile/Scrum ceremonies in a matrixed global environment.

PROFESSIONAL DEVELOPMENT

Independent upskilling · self-directed portfolio work **2024 – 2025**

- Built an end-to-end Microsoft Fabric analytics pipeline (Lakehouse, Dataflows Gen2, OneLake) over a retail dataset (~20K orders, ~\$29M revenue), delivering a Power BI dashboard on an optimized star schema (public on GitHub).
- Developed ~18 months of hands-on Snowflake and dbt practice through portfolio projects — transformation layers, testing patterns, version control, and documentation standards.
- Prototyped a Power BI Copilot natural-language-query proof of concept on a Fabric semantic model, demonstrating AI-driven analytics on lakehouse data.

EDUCATION & CERTIFICATIONS

Master of Science, Information Systems · California State University, Fullerton · 2019 · GPA 3.7

Tableau Desktop Certified · CargoWise Certified Operator & Specialist · Kofax RPA 10 · AWS Cloud Practitioner Essentials
